

VERTICAL ROUTING GUIDES FOR ACH™ HOUSINGS

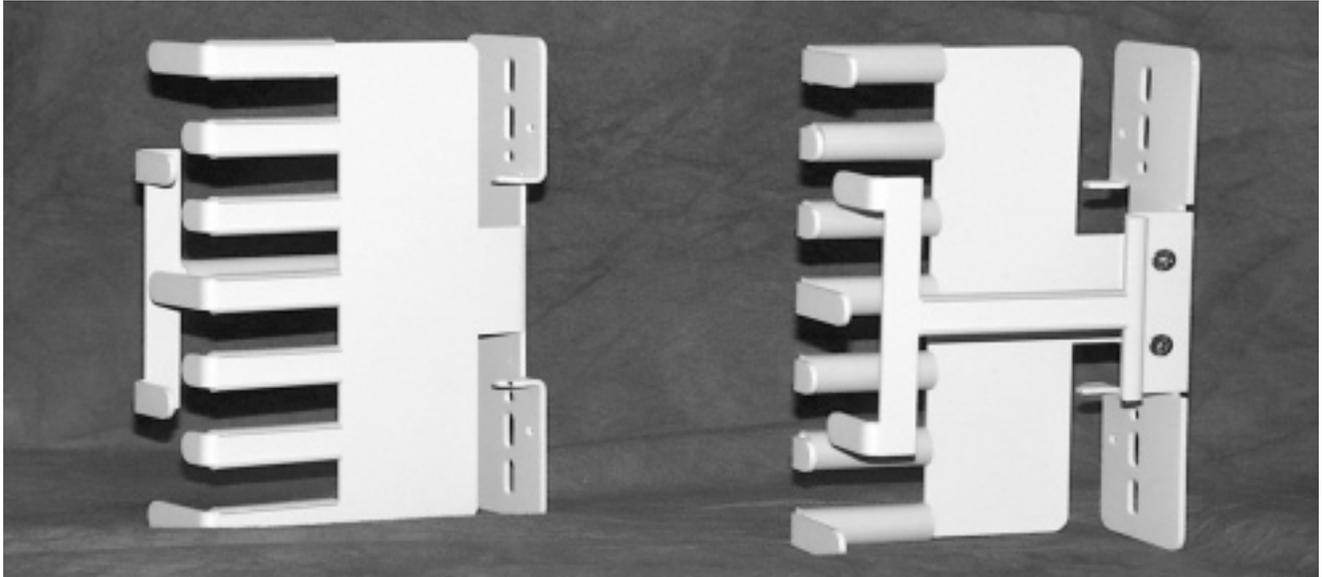

Figure 1 — Vertical Routing Guides

1. General

1.1 The Vertical Routing Guides for ACH Housings (Figure 1), ACH-VRG-8, manufactured by Siecor, are designed to be mounted on 23-inch equipment racks with either EIA or WECO hole spacing. The Vertical Routing Guides (VRG) come in sets of two, one for each side of the frame. Each bracket assembly has seven routing “fingers” on one side and two on the other side. These guides will support and separate the jumper cables as they exit the ACH Housings.

1.2 Should this document be reissued, the reason for the revision will appear in this paragraph.

2. Installation

2.1 Orient the bracket assembly with the seven “fingers” facing the inside of the frame (Figure 2).

Figure 2 — Guide Installed on Frame

2.2 Start installing the Routing Guides from the bottom of the frame and work upward, using the #12-24 x 1/2-in. screws provided. If there is a Bottom Jumper Trough installed on the frame, the first VRG should be placed immediately above it. Be sure to install the Guides at the same height on both right and left frame rails. A seven-foot frame, such as the ACH-BAY-7, will require 8 sets of ACH-VRG-8.

2.3 The ACH-VRG-8 also has support tabs built into its mounting surface, which assist in the mounting of ACH Housings. When an ACH Housing without a Rear Door Set is mounted to a frame, it is mounted from the front of the frame. As it is put into position, the support tabs on the ACH-VRG-8 help to hold the ACH Housing in place while the frame attachment screws are installed. The same situation applies when installing the ACH-BHP-8, Blank Housing Panel.

Special Note:
Fiber Optic
Training
Program

Siecor offers comprehensive, integrated training programs. Courses are structured for: telephony, CATV, LAN, Intelligent Transportation Systems and Power Utilities.
